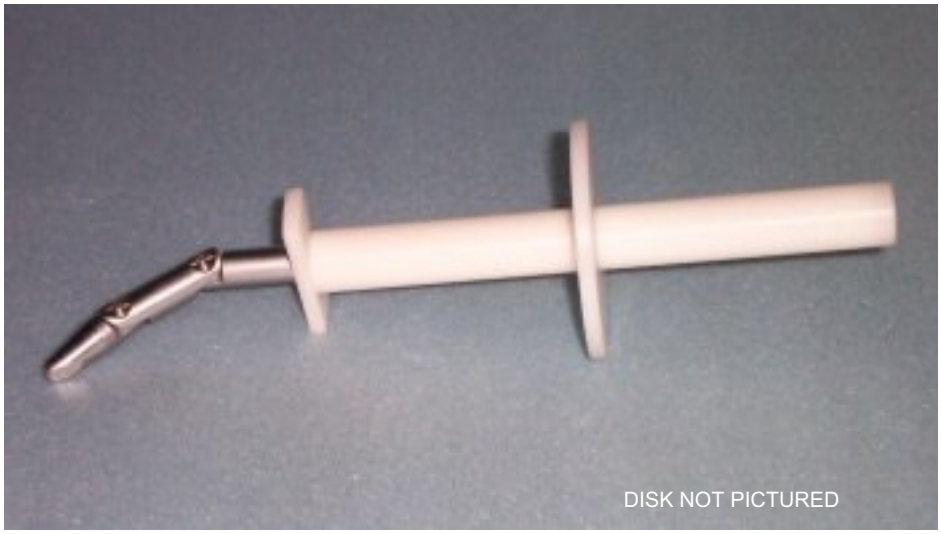
JOINTED FINGER PROBE

TFP-1089

TELECORDIA VERSION - ADULT SIZE



This probe is now required by GR-1089-CORE.

The TFP-1089 is made of Delrin® and flash chrome plated steel. It differs from the IEC standard probe because the jointed finger is 10mm longer and there is no simulated palm. The rest of the dimensions are in accordance with IEC standards. A special disk for the metal finger is also required by GR-1089. The disk is not shown in the picture, but it comes with the probe. Both the disk and the finger are certified to meet the GR-1089 requirements.

The unit includes a banana jack in the handle to check continuity - as required.

The unit is based on adult sized fingers vs. Child size for the other GR-1089 probe (which is plastic).
