

Timer
SBR - Flasher beginning with off with 1 Changeover
 11.25mm housing

Application

Time control

Description

The **SBR Flasher beginning with off timer** offers 16 different timing intervals in one unit. The timing intervals can be adjusted with DIP switches on the upper panel of the relay. The timer can operate on either 230V AC using terminals A1 and A2 or 24V DC using terminals A3 and A2. The green LED indicates the connection to the power supply.

Function

The timing begins with the connection of the power supply to the terminals A1 and A2 or A3 and A2. The timing cycle begins with a pause. After completion of the selected delay time the output relay is energized. This operation is indicated by the red LED. After completion of the selected timing cycle the relay returns to its rest position. This cycle repeats as long as the power supply is connected. Should the power supply be disconnected during the reset time, the timer returns to its original state. This also applies if the supply is disconnected during the timing period.
