

High input voltage LDO Linear Regulators

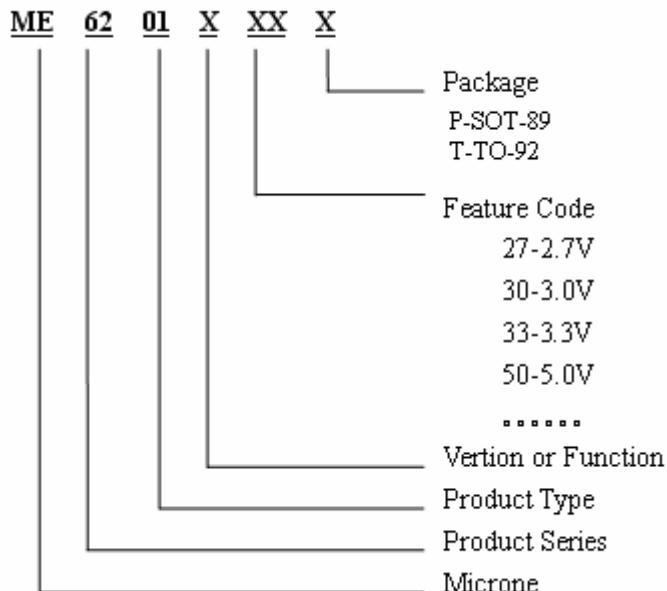

Ver 02

Descriptions:

ME6201 series are low-dropout linear voltage regulators with a built-in voltage reference module, error correction module and phase compensation module. ME6201 series are based on the CMOS process and allow high voltage input with low quiescent current. This series has the function of internal feedback resistor setting from 3V to 5V. The output accuracy is $\pm 2.5\%$.

Features:

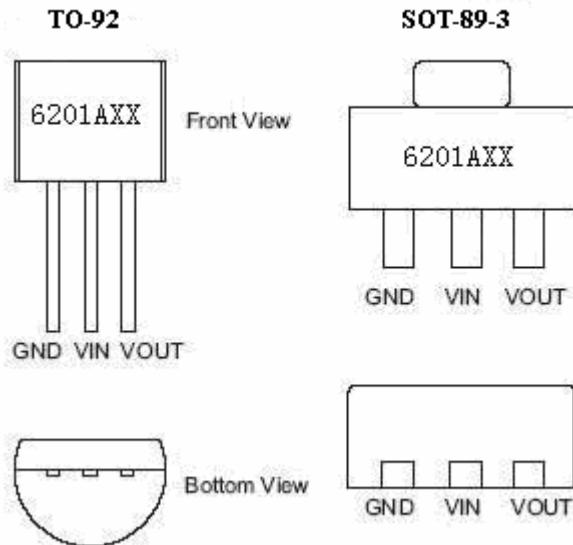

- High output accuracy: $\pm 2.5\%$
- Input voltage: up to 16V
- Output voltage: 3.0 V ~ 5.0V
- Ultra-low quiescent current (Typ. = 3 μA)
- When $V_{in} = 5.3V$ and $V_{out} = 3.3V$ when $I_{out} = 100mA$
- Importation good stability: Typ. 0.1% / V
- Low temperature coefficient
- Ceramic capacitor can be used
- Package: SOT-89, TO-92

Selection Guide:**Applications:**

- Electronic weighbridge
- SCM
- Phones, cordless phones
- Security Products
- Water meters, power meters

Note :

1. $V_{OUT} (T)$: Specified Output Voltage
2. $V_{OUT} (E)$: Effective Output Voltage (i.e. The output voltage when " $V_{OUT} (T) + 2.0V$ " is provided at the V_{IN} pin while maintaining a certain I_{OUT} value.)
3. V_{dif} : $V_{IN1} - V_{OUT} (E)$ '
 V_{IN1} : The input voltage when $V_{OUT}(E)'$ appears as input voltage is gradually decreased.
 $V_{OUT} (E)'$ = A voltage equal to 98% of the output voltage whenever an amply stabilized I_{OUT} { $V_{OUT} (T) + 2.0V$ } is input.
4. The output current can be at least this value.

Due to restrictions on the package power dissipation, this value may not be satisfied. Attention should be paid to the power dissipation of the package when the output current is large.

This specification is guaranteed by design.

Typical application circuit:

Caution The above connection diagram and constant will not guarantee successful operation.
Perform thorough evaluation using the actual application to set the constant.

Application Conditions:

Input capacitor (CIN): 10.0 μF or more

Output capacitor (CL): 10 μF or more (tantalum capacitor)

- Precautions Wiring patterns for the VIN, VOUT and GND pins should be designed so that the impedance is low. When mounting an output capacitor between the VOUT and VSS pins (CL) and a capacitor for stabilizing the input between VIN and VSS pins (CIN), the distance from the capacitors to these pins should be as short as possible(less than 0.5cm).
