为统一和规范产品选型，更好的服务于客户和管理产品，现将重载型拉绳/线式位移传感器作出以下调整:

1、原MPSZFS2-ZM更改为SMZFS2，行程、信号输出及安装尺寸不变。

2、原MPSZFS2-ZL更改为 MPSZFS2,行程由4500-35000mm更改为4500-20000mm。

3、重载型拉绳传感器不在使用机座规格代码ZM、ZL字母，依据产品系列任意选择行程即可。

4、重载型拉绳传感器分为三大系列，分别为：

SMZFS2系列（行程100-4000mm），

WEPZFS2系列（行程100-4000mm），

MPSZFS2系列（行程4500-20000mm），

《MPSZLFS2系列（行程20000-45000mm）研发中》。

To unify and standardize the product selection, and to better serve customers and manage the products, the following adjustments have been made to the heavy-duty pull cord/linear displacement sensor:

1. The original MPSZFS2-ZM has been changed to SMZFS2, with the stroke, signal output and installation dimensions remaining unchanged.

2. The original MPSZFS2-ZL has been changed to MPSZFS2, and the stroke has been changed from 4500 - 35000mm to 4500 - 20000mm.

3. The heavy-duty pull cord sensor no longer uses the machine base specification codes ZM and ZL. The stroke can be selected arbitrarily based on the product series.

4. The heavy-duty pull cord sensor is divided into three major series, namely:

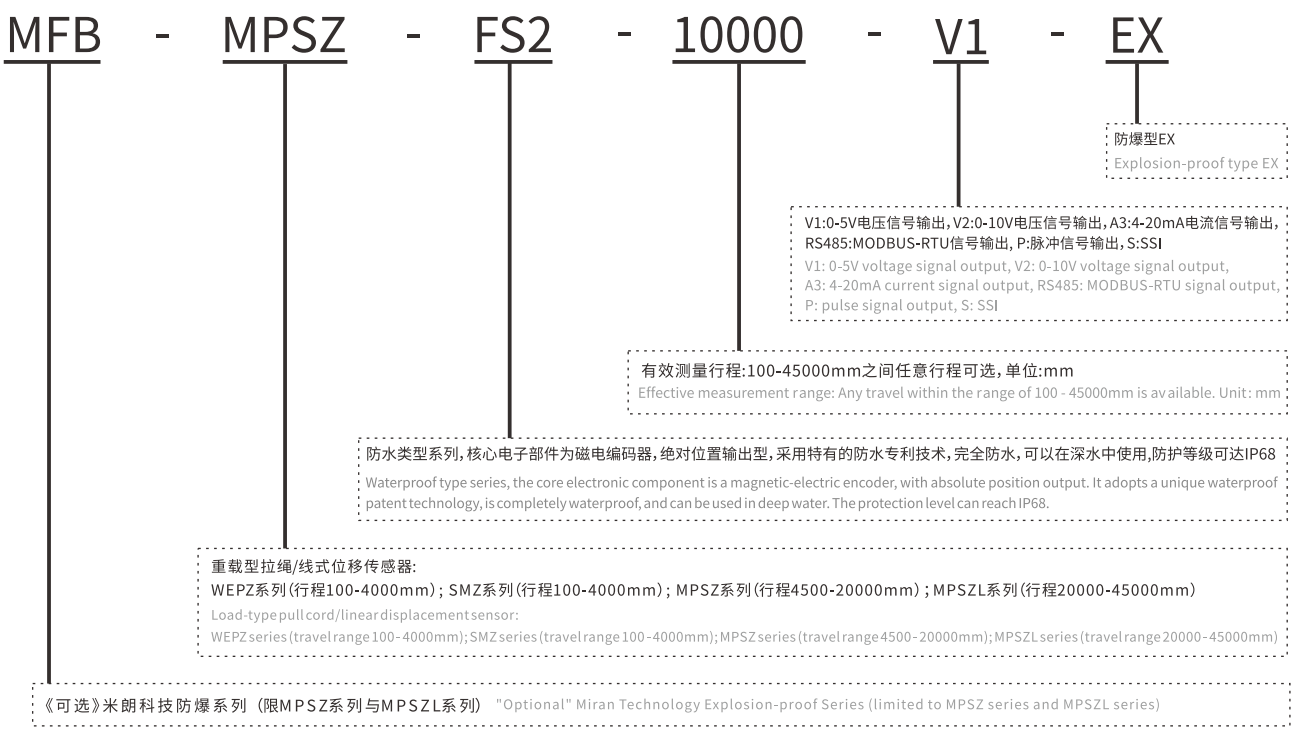

SMZFS2 series (stroke 100 - 4000mm),

WEPZFS2 series (stroke 100 - 4000mm),

MPSZFS2 series (stroke 4500 - 20000mm),

“MPSZLFS2 series (stroke 20000 - 45000mm) is under development."

安装注意事项 Installation Precautions

1、电气连接请按照传感器上的接线说明接线，确保传感器正确接线才能通电；利用固定螺丝孔或磁铁，依现场及机器安装空间设施需要,直接安装或另加保护或其他机械使用。

1.Please follow the wiring instructions on the sensor for electrical connections to ensure that the sensor is correctly wired before it can be powered on;The use fixed screw holes or magnets, as required by the site and machine installation space facilities, direct installation or additional protection or other mechanical use.

2、不锈钢钢丝绳安装时，需确保拉线处于平行于出线口拉出，避免钢丝绳被出线口反复摩擦导致断裂；(不锈钢索安装时，使钢索绳由出线口至移动部位机件工作处于平行滑动，保持较小角度〔容许偏差正负3度〕，以确保测量精度及钢索之寿命)。

2.When installing stainless steel wire ropes, it is necessary to ensure that the pulling wire is pulled out parallel to the outlet to avoid the wire rope being repeatedly rubbed by the outlet and causing it to break; When installing stainless steel cables, the steel cable should slide parallel from the outlet to the moving parts, maintaining a small angle (allowable deviation of plus or minus 3 degrees) to ensure measurement accuracy and the lifespan of the steel cable.

3、确保拉线处于平行于出线口拉出，保持较小角度（容许偏差＋/-3°）以确保量测精度及钢索之寿命。钢索本体是多股不锈钢钢丝SUS316材质，外层为尼龙涂层,请勿让其受外力的割伤、烧损、撞击等不当之事发生：过量的粉尘、积屑或是足以破坏钢索的物品贮留于内部的滑轮或出线口将造成钢索破损，导致运转不顺的故障。

3.Ensure that the cable is drawn parallel to the outlet, and maintain a small Angle (allowable deviation +/-3°) to ensure measurement accuracy and cable life. The steel cable body is multi-strand stainless steel wire SUS316 material, the outer layer is nylon coating, do not let it be cut by external force, burn, impact and other improper things occur: excessive dust, debris accumulation or enough to damage the steel cable stored in the internal pulley or outlet will cause damage to the steel cable, resulting in bad operation of the fault.

4、若使用于非直线运动的机构，请加装适当的滑轮运转转向不同方向拉出；若使用于环境恶劣或特殊场合，请自行加装保护机构。

4. If it is used in the mechanism of non-linear movement, please install the appropriate pulley to run in different directions to pull out; If used in harsh environment or special occasions, please install your own protection mechanism.

5、8米及以上拉绳尺（L型及XL型拉绳尺）为避免运输中传感器内部震动，装有锁止螺丝，使用前需拆除螺丝，拉绳才可顺畅拉出，若不拆除锁止螺丝，强行拉出拉绳，有可能会损坏拉绳尺。

5. In order to avoid the internal vibration of the sensor during transportation, the locking screws are installed. The screws must be removed before use, so that the rope can be pulled out smoothly. If the locking screws are not removed and the rope is pulled out forcibly, the rope ruler may be damaged.

6、M机座及以下系列产品往复运动瞬间加速不可超过1000mm/秒；L机座及以上系列产品往复运动瞬间加速不可超过500mm/秒；否则将导致钢索断裂，恕本公司不承担正常使用范围以外的责任。

6. M frame and the following series of products reciprocating instantaneous acceleration shall not exceed 1000mm/SEC; L The instantaneous acceleration of the reciprocating motion of the frame and above series products shall not exceed 500mm/ s; Otherwise, the cable will be broken, and the company will not assume the responsibility outside the normal use range.

7、拉绳位移传感器属于精密仪器，请勿敲击或撞击，注意传感器和钢丝绳的清洁，以延长使用寿命；(钢索本体是不锈钢，外覆耐磨防腐塑胶层，请勿让其受外力的割伤、烧损、撞击等不当之事发生；过量的粉尘、积屑会破坏钢索或贮留于内部的滑轮，或将造成钢索破损，导致运转不顺的故障)。

7. The rope displacement sensor is a precision instrument. Do not knock or impact it. Pay attention to the cleanliness of the sensor and wire rope to extend its service life; (The steel cable body is made of stainless steel and covered with a wear-resistant and anti-corrosion plastic layer. Do not let it be cut, burned, or hit by external forces. Excessive dust and debris can damage the steel cable or the pulleys stored inside, or cause damage to the steel cable, resulting in poor operation).

8、未安装于工作台或固定坐前，请勿用手或是其它产品将钢索拉出并让其瞬间自行弹回，此举将造成钢索断裂,伤害本体结构及人身安全；拉线拉出后不要松开，需匀速拉出和缩回。

8. Do not use your hands or other products to pull out the steel cable before installation on the workbench or in front of the fixed seat, and let it instantly rebound on its own. This will cause the steel cable to break, damage the structure and personal safety of the body; After pulling out the cable, do not loosen it. It needs to be pulled out and retracted at a constant speed.

注:若使用于室外或环境比较恶劣等特殊场合，可配置米朗防水防尘出线口和防护外壳，或请自行加装保护机构或与本公司联系定制加装保护机构，否则导致产品损坏，公司不予负责！

Note: If used in outdoor or harsh environments or other special occasions, Mirang waterproof and dustproof outlet and protective shell can be configured, or please install a protective mechanism yourself or contact our company to customize the installation of a protective mechanism. Otherwise, the company will not be responsible for product damage!

安装说明 Installation Instructions

(因公司产品型号较多，安装方式也较多，有滑动支架螺丝安装式、固定螺丝孔安装式、磁吸式等)，以下为常见的滑动支架螺丝安装式举例说明：

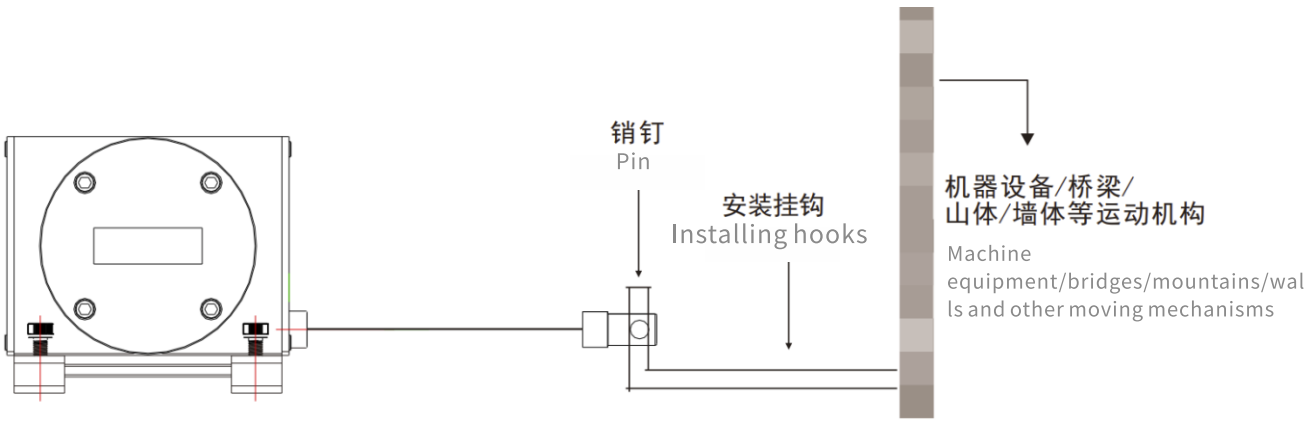

(Due to the variety of product models and installation methods in the company, there are sliding bracket screw installation, fixed screw hole installation, magnetic suction installation, etc.) The following are common examples of sliding bracket screw installation:

1.先固定安装支架：将安装支架顺着传感器底部凹槽滑入，然后调整支架的位置，将螺丝插入安装孔固定在安装面；

1. Fix the mounting bracket first: slide the mounting bracket along the groove at the bottom of the sensor, then adjust the position of the bracket, insert the screw into the mounting hole and fix it on the mounting surface;

2.测量端做L型销钉或者螺丝插入传感器安装头5mm的孔中固定传感器测头(或其它可靠连接方式)

2. Insert an L-shaped pin or screw into the 5mm hole of the sensor mounting head at the measuring end to fix the sensor measuring head (or other reliable connection methods)

The shell material of the product is mostly high-performance industrial aluminum alloy, surface oxidation treatment, the color of surface oxidation can be customized, beautiful and generous, and has the characteristics of anti-static, anti-interference, non-conductive

电阻输出的拉绳位移传感器，600mm及600mm以下量程默认电阻值为5KΩ，600mm以上量程电阻值默认为10KΩ（600mm以上的拉绳位移传感器如果需要电阻值为5KΩ，下单时需提前备注）。拉绳位移传感器所使用的钢丝绳为多股不锈钢钢丝SUS316材质，外层为尼龙涂层，M型及以下外形尺寸默认使用0.8mm线径的钢丝绳，L型及以上尺寸默认使用1.5mm线径的钢丝绳；M型及以下外形尺寸也可以备注使用线径1.5mm的钢丝绳，但是外形尺寸不变的情况下，钢丝绳线径变粗，可做的最大量程也会相应的缩短，以M型拉绳尺举例，使用线径0.8mm的钢丝绳，最大量程可做到4000mm,若使用线径1.5mm的钢丝绳，则最大量程只能做到2000mm。

The default resistance of the cable displacement sensor output resistance is 5KΩ for ranges shorter than 600mm, and 10KΩ for ranges longer than 600mm. (If the resistance of the cable displacement sensor larger than 600mm is 5KΩ, Note in advance when placing an order.)The steel wire rope used by the pull rope displacement sensor is made of multi-strand stainless steel wire SUS316, the outer layer is nylon coated, the steel wire rope of 0.8mm wire diameter is used by default in the shape size of M type and below, and the steel wire rope of 1.5mm wire diameter is used by default in the shape size of L type and above. M type and the following dimensions can also be noted to use wire rope with wire diameter of 1.5mm, but if the outline size remains unchanged, the wire rope diameter becomes thicker, and the maximum measuring range that can be made will be shortened accordingly. For example, using wire rope with wire diameter of 0.8mm, the maximum measuring range can be 4000mm. If wire rope with wire diameter of 1.5mm is used, the maximum measuring range can be 4000mm. The maximum range can only be 2000mm.

不同外形尺寸的拉绳位移传感器，能做的最大量程均有所不同，例如MPS-S型的拉绳尺，量程范围是100-1300mm之间量程任意可选，最小量程可做到100mm,即测量范围是0-100mm；最大量程可做到1300mm，即测量范围是0-1300mm。可以根据客户的需要定做。

Different dimensions of the rope displacement sensor, can do the maximum range are different, such as MPS-S type of rope ruler, the range is 100-1300mm range optional, the minimum range can be 100mm, that is, the measurement range is 0-100mm; The maximum range can be 1300mm, that is, the measuring range is 0-1300mm. Can be customized according to customer needs.

专业术语 Terminology

传感器/编码器的精度主要包含线性精度、分辨率和重复精度这三个参数。这三个参数，一般都是取多次测量之后的最大值为依据。线性精度、分辨率和重复精度是传感器/编码器性能的三个重要指标。高分辨率并不直接等同于高精度，因为高分辨率只是表示传感器/编码器能够区分更多的单位，但并不保证每个单位的测量都准确。

The accuracy of the sensor/encoder mainly includes three parameters: linearity accuracy, resolution and repetition accuracy. These three parameters are generally based on the maximum value after multiple measurements. Linear accuracy, resolution and repeatability are three important indicators of sensor/encoder performance. High resolution is not directly equivalent to high precision, because high resolution simply means that the sensor/encoder can distinguish more units, but does not guarantee that every unit of measurement is accurate.

线性精度：是指输出值与真实值之间的差异，即传感器/编码器检测到的位置与实际位置之间的偏差。计算方法为：线性精度=（理论值-实际测试值）÷满量程 x 100%。

Linear accuracy:Refers to the difference between the output value and the true value, that is, the deviation between the position detected by the sensor/encoder and the actual position. The calculation method is: linear accuracy = (theoretical value - actual test value) ÷ full scale x 100%.

分辨率：是指传感器/编码器能够区分的最小单位，例如：一个电位计原理模拟量输出的位移传感器，其分辨率是无限小的；一个磁致伸缩原理输出的位移传感器，其分辨率受波导丝材料、内部芯片和电路处理等因素，其分辨率大概为0.01mm；一个单圈2000个脉冲输出的增量式编码器，那编码器的轴转动一圈输出为2000个脉冲，其分辨率为2000P/R；一个单圈12位的绝对值编码器可以将360度分为4096等份；以12位芯片举例，12位即为2^{12}=4096，量程/4096= 分辨率，例如2000mm量程RS485信号输出的拉绳位移传感器，分辨率为2000/4096=0.48mm。如果选用16位芯片，16位即为2^{16}=65536，量程/65536 =分辨率，例如2000mm量程RS485信号输出的拉绳尺位移传感器，分辨率为2000/65536=0.03mm。拉绳位移传感器默认分辨率为12位，可选16位。

Resolution ratio:Refers to the sensor/encoder can distinguish the smallest unit, for example: a potentiometer principle analog output of the displacement sensor, its resolution is infinitely small; A magnetostrictive principle output displacement sensor, its resolution depends on the waveguide wire material, internal chip and circuit processing and other factors, its resolution is about 0.01mm; An incremental encoder with 2000 pulse output per turn, the shaft of the encoder rotates one turn to output 2000 pulses, and its resolution is 2000P/R; A single-turn 12-bit absolute encoder can divide 360 degrees into 4096 equal parts; Take 12-bit chip as an example, 12-bit is 212=4096, range /4096= resolution, for example, 2000mm range RS485 signal output rope displacement sensor, resolution is 2000/4096=0.48mm. If the 16-bit chip is selected, the 16-bit is 216=65536, range /65536= resolution, for example, the drawstring ruler displacement sensor with 2000mm range RS485 signal output has a resolution of 2000/65536=0.03mm. The default resolution of the cable displacement sensor is 12 bits (optional: 16 bits).

重复精度：是指在同一个实际位置，传感器/编码器在后续在这个实际位置时候取得的不同测量值之间的误差。

Repeated accuracy:It refers to the error between different measurement values obtained by the sensor/encoder at the same actual position in the future.

影响传感器/编码器精度的因素：传感器/编码器的精度不仅仅取决于其自身的精度和分辨率，还受到其他因素的影响。例如，机械结构的设计、伺服电机的性能、伺服驱动器的性能、运动控制器的性能以及环境温度等都会影响传感器/编码器的最终精度。因此，在选择和使用传感器/编码器时，需要综合考虑这些因素，以确保系统的整体性能。

Factors affecting sensor/encoder accuracy:The accuracy of the sensor/encoder depends not only on its own accuracy and resolution, but also on other factors. For example, the design of mechanical structure, the performance of servo motor, the performance of servo driver, the performance of motion controller, and the ambient temperature will affect the final accuracy of the sensor/encoder. Therefore, when selecting and using sensors/encoders, these factors need to be taken into account to ensure the overall performance of the system.

关于脉冲输出 About Pulse Output

由于脉冲信号输出的拉绳传感器所选配的编码器种类较多，供电电压和产品的分辨率会有所不同。具体供电电压及接线定义以产品实物标签上标注为准（通常为8-30V宽电压，但也有部分型号为5V电压，接入其他电压可能会导致烧坏）。

Because there are many types of encoders available for pulse-signal output rope sensors, the supply voltage and product resolution will be different. The specific supply voltage and connection definition are subject to the label of the product (usually 8-30V wide voltage, but some models are 5V voltage, and other voltages may cause burnout).

由于行程不同所以主体尺寸大小会不同，因此其内部的线轮外径也不同，这些线轮转一圈就相当于编码器转一圈，拉绳是盘绕在线轮上的，拉绳拉出一点，线轮就会转动一点，所以拉绳的拉出位移分辨率与拉绳尺尺寸大小和选择装配的编码器种类有关（部分标准请参考下表），拉绳尺具体分辨率以产品实物标签上标注的分辨率为准，或者提前咨询我司业务员及技术人员确认。

Due to the different travel so the main size will be different, so its internal wire wheel outside diameter is different, these wire wheel turn a circle is equivalent to the encoder turn a circle, the rope is coiled on the online wheel, the rope pulls out a little, the wire wheel will turn a little, Therefore, the pull out displacement resolution of the rope is related to the size of the rope ruler and the type of encoder selected for assembly (please refer to the following table for some standards), the specific resolution of the rope ruler is determined by the resolution marked on the product physical label, or consult our salesman and technical personnel in advance to confirm.

编码器每圈脉冲数越高，精度会越好，但并不是越高越实用，具体要看客户的PLC的接收脉冲信号的速度，如果脉冲数过高，拉绳运动速度过快，PLC未必能高速采集到所有脉冲信号，如PLC采集速度较慢，就会导致数据失真，会漏掉脉冲数。所以要选用适当的编码器才行，目前我司的标准默认使用的编码器标准为每圈2000个脉冲的，如有其他需求，也可以更改）。

The higher the number of pulses per turn of the encoder, the better the accuracy, but not the higher the more practical, the specific depends on the speed of the customer's PLC to receive the pulse signal, if the pulse number is too high, the rope movement speed is too fast, the PLC may not be able to collect all the pulse signals at high speed, such as the PLC acquisition speed is slow, it will lead to data distortion, will miss the number of pulses. Therefore, it is necessary to choose the appropriate encoder, the current standard of our company default encoder standard is 2000 pulses per circle, if there are other needs, can also be changed).

The following table shows the resolution parameters of the rope pull displacement sensor with an encoder of 2000 pulses per revolution. Other commonly used encoders include 600, 1000, 2000, 2500, 3600 pulses per revolution, etc. For specific parameters, please contact us for consultation. When calculating the resolution, use: (the diameter of the reel + the diameter of the wire) *3.1415926/2000 to get the resolution (where 2000 represents the encoder with 2000 pulses per revolution. If the encoder has another number of pulses per revolution, just change 2000 to another number.)

产品概述 Overview

MPSFS2防水型(磁感应)拉绳位移传感器，又称拉绳编码器拉绳尺，拉线尺，拉线编码器，拉绳位移传感器。采用米朗公司自主研发多圈磁感应绝对值编码器，内部使用高强度灌封胶封装，从而保证磁感应绝对值编码器能够在水下长期正常工作。MPSFS2-S防水绝对值型拉绳位移传感器零部件均采用在水内永不生锈材料制作，如：不锈钢发条和拉绳，铝合金外壳和线轮，塑料发条外壳，陶瓷轴承。S机座和M机座系列产品往复运动的瞬间加速不可超过1米/秒；L机座和XL机座系列产品往复运动的瞬间加速不可超过0.5米/秒；否则将导致钢索断裂。

MPSFS2-S量程范围：100mm-1300mm，MPSFS2-M量程范围：1000mm-4000mm，MPSFS2-L量程范围：500mm-10000mm，MPSFS2-XL量程范围：11000mm-35000mm(其他行程可定制)。

MPSFS2 waterproof (magnetic induction) rope displacement sensor, also known as rope encoder rope ruler, rope ruler, rope encoder, rope displacement sensor. We use the independently developed multi coil magnetic induction absolute value encoder by Mirang Company, which is encapsulated with high-strength sealing glue internally to ensure that the magnetic induction absolute value encoder can work normally underwater for a long time. The MPSFS2-S waterproof absolute value pull rope displacement sensor components are all made of materials that will never rust in water, such as stainless steel spring and pull rope, aluminum alloy shell and wire wheel, plastic spring shell, and ceramic bearings. The instantaneous acceleration of the reciprocating motion of the S and M base series products shall not exceed 1 meter/second; The instantaneous acceleration of the reciprocating motion of the L base and XL base series products shall not exceed 0.5 meters per second; Otherwise, it will cause the steel cable to break.

MPSFS2-S range: 100mm-1300mm, MPSFS2-M range: 1000mm-4000mm, MPSFS2-L range: 4500mm-10000mm, MPSFS2-XL range: 11000mm-35000mm (other travel options can be customized).

产品概述 Overview

MFB-MPSFS2防水防爆型(磁感应)拉绳位移传感器，又称拉绳编码器拉绳尺，拉线尺，拉线编码器，拉绳位移传感器。采用米朗公司自主研发多圈磁感应绝对值编码器，内部使用高强度灌封胶封装，从而保证磁感应绝对值编码器能够在水下长期正常工作。MFB-MPSFS2-S防水防爆绝对值型拉线式位移传感器零部件均采用在水内永不生锈材料制作，如：不锈钢发条和拉绳，铝合金外壳和线轮，塑料发条外壳，陶瓷轴承。S机座和M机座系列产品往复运动的瞬间加速不可超过1米/秒；L机座和XL机座系列产品往复运动的瞬间加速不可超过0.5米/秒；否则将导致钢索断裂。MFB-MPSFS2-S量程范围：100mm-1300mm；MPSFS2-M量程范围：1000mm-4000mm；MPSFS2-L量程范围：4500mm-10000mm；MPSFS2-XL量程范围：11000mm-35000mm(其他行程可定制)。

MFB-MPSFS2 waterproof and explosion-proof (magnetic induction) rope displacement sensor, also known as rope encoder rope ruler, rope ruler, rope encoder, rope displacement sensor. We use the independently developed multi coil magnetic induction absolute value encoder by Mirang Company, which is encapsulated with high-strength sealing glue internally to ensure that the magnetic induction absolute value encoder can work normally underwater for a long time. The MFB-MPSFS2-S waterproof and explosion-proof absolute value pull type displacement sensor components are all made of materials that will never rust in water, such as stainless steel spring and pull rope, aluminum alloy shell and wire wheel, plastic spring shell, and ceramic bearings. The instantaneous acceleration of the reciprocating motion of the S and M base series products shall not exceed 1 meter/second; The instantaneous acceleration of the reciprocating motion of the L base and XL base series products shall not exceed 0.5 meters per second; Otherwise, it will cause the steel cable to break. MFB-MPSFS2-S range: 100mm-1300mm, MPSFS2-M range: 1000mm-4000mm, MPSFS2-L range: 4500mm-10000mm, MPSFS2-XL range: 11000mm-35000mm (other travel options can be customized).
