

HygroPalm 0 **Portable humidity and temperature instrument**

Operating instructions

General description:

The HygroPalm 0 instruments are indicators for relative humidity and temperature with an integrated probe. The sensor module measures relative humidity and temperature; all indicated values are calculated from these by the HygroPalm. This operating instruction manual is a concentrated excerpt of the full version (in English and German) that is published on the Internet. For better comprehension, it is completed with flow charts.

The full version may be downloaded from www.rotronic-humidity.com

Fuction Keys

Power Supply

HygroPalm operates with a regular 9V alkaline battery or with a 9V rechargeable battery.

Important: The HygroPalm is shipped with a regular 9V battery and is factory preset with the battery charge function turned off. If you plan on using a rechargeable battery (requires docking station), you should turn on the charge function (see Menu – Sys-Status). Before using a regular battery again, be sure to turn off the battery charge function. Trying to charge a regular battery may cause the battery to burst and may damage the instrument.

Battery:

Type: 9V / 6AM6 or 8.4 V accumulator TR7/8

The display provides information regarding the battery status. When the message „Low Batt“ appears, the instrument can typically be used for another 10 to 15 minutes.

Battery compartment:

For opening: Turn handle and pull

Optional Docking Station (PalmDock)

For HygroPalm 0, an optional docking station is available. The docking station accepts an external AC adapter for recharging the battery. HygroPalm 0 has no RS232 interface.

Operating of Hygropalm 0

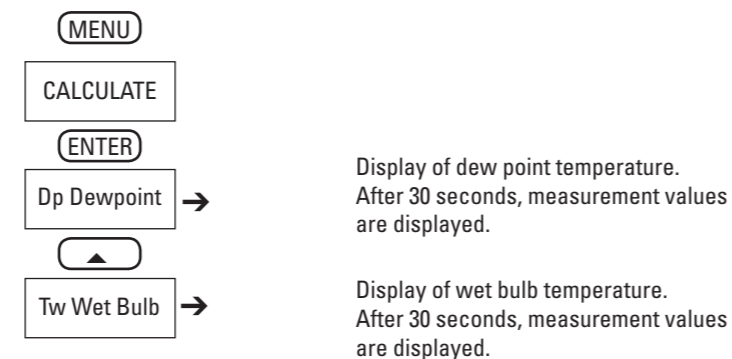

1. Switching-on, measurement

2. Menu selection

Press the Menu key, then push an arrow key. Every push on the arrow key changes to the next menu item. After the last menu item is reached, a new push returns to the first menu item. The details of the menu items are described below:

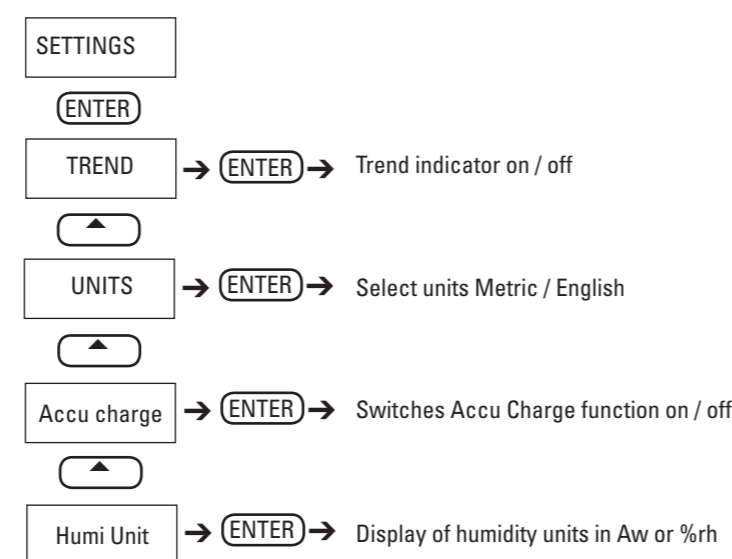

3. Menu CALCULATE

4. Menu SYS-STATUS

5. Menu SETTINGS

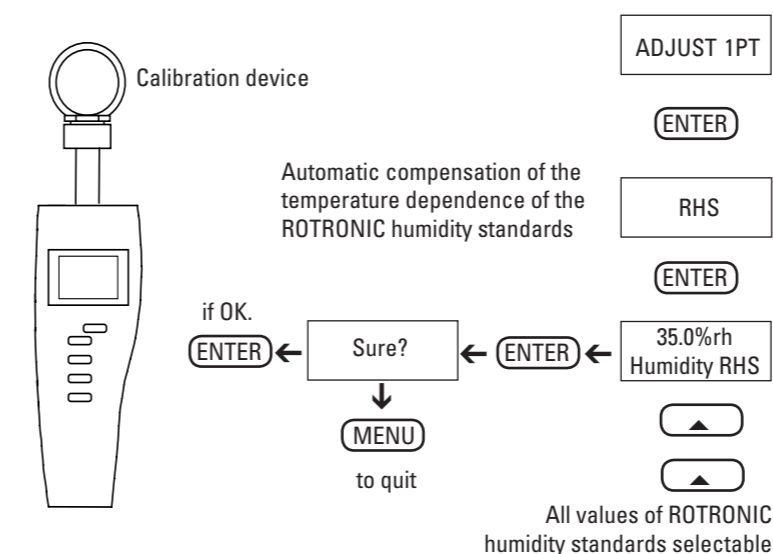

6. Menu PROBE

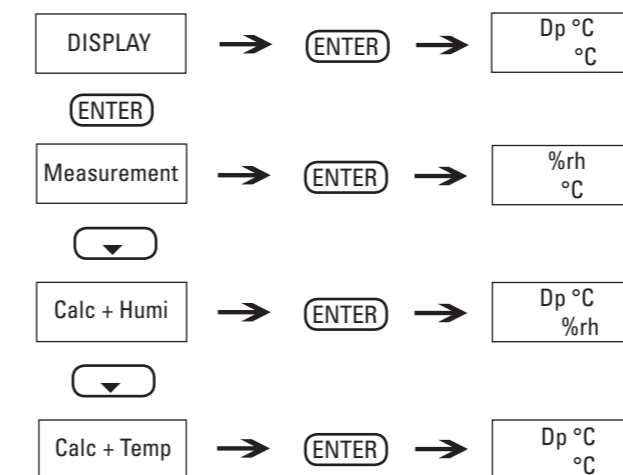

7. Menu ADJUST 1 PT

One point adjustment with ROTRONIC humidity standards

8. Menu DISPLAY

Example dew point: (Requires pre-setting for dew point measurement)

Technical data

Operation	9V alkaline battery 12...15 VDC adapter (100 mA) C (+) Tip 9V rechargeable battery, 110 mAh
Max. current consumption	10 mA
Operating limits at electronics	0...99 % rh / -10...+50 °C
Measured parameters relative humidity temperature	0...100,0 %rh -99,9...+999,9 °C or °F
Calculated parameters	dew / frost point and wet bulb temperature ¹⁾
System accuracy at 23 °C/73 °F	± 1.5 %rh / 0.3 K
Probe type	integrated digital probe
Display	alphanumeric LC display with trend indicator
Battery status	automatic Indication
HOLD function	briefly push the ON/OFF Button
Housing material	ABS
Housing dimensions	230 x 80 x 30 mm
Weight (w/o probe)	200 g

¹⁾ For the computation of these parameters, a pressure constant of 1013.25 hPa is used.
